

Mobile pre-cleaning

Combination of cleaning screw and suction cleaner

The conveyed goods are first conveyed in a cleaning screw of about 6 m in length over a sieve surface (perforated sheets) of about 3 m in length. The perforated sheets can be changed in accordance with the conveyed goods.

To achieve a better sieve effect, the conveyor screw is fitted with a nylon brush coil on the length of the sieve floor. A cleaning of dust, broken grains and fine particles is carried out via the cleaning screw.

In the second step, after the cleaning screw a suction cleaner (lamella cleaner) follows for suction of short straw, dust and spelts.

Technical data

- Power: 50 t/h, 80 t/h
- Replaceable perforated sheets
- Robust carriage with used car tyres
- Compact and mobile unit
